PROJECTS

Project 1: Guest House Booking System (GHBS)

June 2018- July 2018

Description Detail

GHBS is a platform by which the DRDO members can books their rooms without any paper-work. Its provides facility to change their password and check the status of book allotting. This makes the booking system more user-friendly.

Technologies

Java, MySql, SQLyog

Project 2: Food Recipe Mobile Application

May 2019 - July 2019

Description Detail

Develop a food recipe mobile application from scratch by which a user can get the recipe of the food which wants they cook. Food items are categories according to states. In this, I have provided online and offline feature so that user can watch videos for that recipes.

Technologies

Java, MySql

Project 3: Sevaro Healthcare

May 2020 - Now

It's a platform for digital telemedicine where both patient and doctor can interact through this Web platform.

<https://sevaro-stroke-hospital.web.app/> for the hospital's login

<https://sevaro-stroke-doctor.web.app/> for the doctor's login

Any patient can interact with the doctor via the corresponding platform(i.e. through video call) and can get the consult note for the medications.

Both the above mentioned platforms are designed and developed using the Front End Technologies like Angular, Bootstrap etc.
